

# Be part of the solution, not the problem.

*"A picture is worth a thousand words."*

**Before**

**After**

**NOTE:** On the left hand side of each photograph, you can see a creek bed that was created by poor matting a year ago. The integrity of the wetland has been destroyed causing incomprehensible damage. One result is this newly formed creek bed flows into a river, polluting the river with silts. Call New South before you permit and **eliminate problems** on your project sites.

## Why use anyone else?

New South crews laid down and picked up the emtek® Wetland Access System in this sensitive wetland, protecting the fragile ecosystem. This wetland will recover very quickly from New South's access solution - as if we had never been there!

New South will show you how to:

- **Use fewer mats.**
- **Save \$\$\$** on fines, penalties & mitigation.
- **Gain great public perception.**
- **Be part of the solution, not the problem.**

The United States has **lost a whopping 90,000,000 acres of wetlands** - almost half! Partner with us to save them.

If you missed the video on our last Eblast, click on the link below. **Call us before you permit** your next job. New South provides the **best access solution** for each project site - **on deadline & within budget!**
